FINISH.

**HEXACOMB®**  
STRENGTH. QUALITY. PERFORMANCE.

KNOWLEDGE & EXPERIENCE

**We produce and sell more than a product.  
We create solutions.**

At Pregis Hexacomb,<sup>®</sup> we've never viewed ourselves as a typical packaging manufacturer. Our philosophy has always been about treating customers as partners. We strive to listen, understand, develop and commercialize solutions that are both relevant and unique to the specific application. As the oldest and only international producer of products of its kind, we offer our customers knowledgeable sales and service professionals who are market veterans, employing the highest integrity, sense of urgency, flexibility and collaborative approach to problem solving. Companies who work with Pregis Hexacomb know and trust that they are procuring the best-in-class, top quality protective packaging solutions in the industry and across North America and Western Europe.

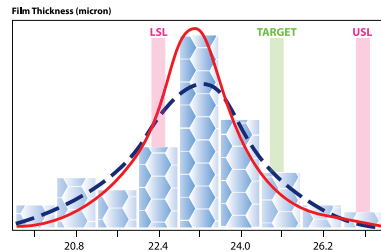

## ENVIRONMENTAL STEWARDSHIP

## A sustainable, stronger, more lightweight alternative to traditional packing materials.

Whether the need is shipping valuable, fragile materials or for applications that demand uncompromised strength, Hexacomb is the lightweight, sustainable solution. Our 100% paper-based product is made from renewable resources (a minimum of 20% recycled fiber content) and is recyclable to provide the perfect blend of performance and environmental responsibility. Hexacomb products are naturally lightweight, helping to lessen fuel consumption during transport. In turn, this minimizes the carbon footprint and reduces shipping costs. Its main raw material composition, paper, alleviates dependence on petroleum-based products and aids in the preservation of precious fossil fuels (used to manufacture plastic packaging alternatives). Pregis Hexacomb welcomes the opportunity to work collaboratively with our customers to achieve results that enhance efficiency and sustainability. We work with our suppliers to source product components that are recycled, renewable and promote the use of sustainable forest initiatives.

## Manufactured with state-of-the-art equipment, labs and design standards for optimal performance.

Since the company's inception more than 30 years ago, Pregis Hexacomb has and continues to set the industry standard for quality and performance. Our team of design and packaging engineers are industry experts in creating the right solution at the right time and for the right application. We utilize the knowledge and advanced skill set of our people and couple it with our global innovation labs, which house advanced testing and evaluation equipment. Our goal is to not only meet, but exceed our customers' expectations on design, delivery and fit for use. We accomplish this by adhering to strict manufacturing guidelines and quality testing standards including compression testing, shock resistance evaluation and on-the-dock simulations. At Pregis Hexacomb, we deploy a strict discipline of statistical process control and continuous improvement to monitor process and to control product variation. These methods lead us to consistently deliver maximum product quality and performance results.

QUALITY  
ENGINEERING

LARGEST  
MANUFACTURING  
FOOTPRINT IN  
NORTH AMERICA &  
EUROPE

## Working with a global industry originator has many benefits.

Pregis Hexacomb has continually pioneered new technologies and applications in shipping and packaging. Our solid foundation in North America has allowed us to expand abroad to deliver the same quality solutions that our customers have come to expect. With established plants worldwide to aid in reducing shipping costs and delivery times, our international footprint maximizes the availability and assortment of our products in Europe and North America. That, coupled with superior customer service and sales support, helps our customers grow and enables them to offer end-users exceptional products and solutions that optimize consumer satisfaction.

Hexacomb is versatile enough for a range of applications, markets and industries.

#### PACKAGING

Hexacomb's product features and attributes offer solutions for a variety of applications. Whatever the product, cargo, or specific need, Pregis Hexacomb provides a customized solution to maximize protection and customer satisfaction while minimizing product damage, space and shipping cost.

Common packaging uses for Hexacomb are:

- Home appliances and fixtures
- Hazardous materials
- Medical instruments
- Automotive parts
- Electronics
- Furniture
- Glass

#### CUSTOMIZATION & CHOICE

#### SHIPPING & TRANSPORT

Hexacomb products are available in the same standard dimensions as plywood and triple wall at a fraction of the weight. Hexacomb is a suitable replacement for wood due to its unique, structural composition, which does not subject it to the same problematic import restrictions as wood. Our products are safe and easy to handle, reducing the risk of injury. Hexacomb's versatile nature allows it to be combined with corrugated trays, bin boxes or point of purchase displays, providing a truly custom solution. The vertical cell orientation allows the deck to handle heavy loads of up to 2,500 pounds. Available in many sizes, Hexacomb products can be supplemented with an optional wrap to further enhance strength and longevity of the material. Blocks and runners can be applied to the material with standard PSA's, hotmelts or glues.

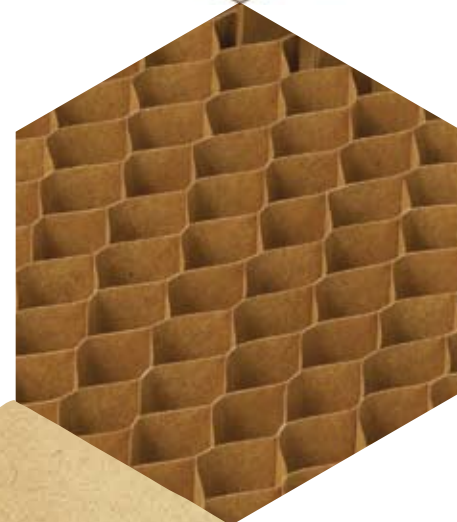

Hexacomb can be used in a variety of transport functions, including:

- Riser strips and protective framing around glass
- Dunnage in trucks, ships and railcars
- Custom cut bracing and load separation
- Crating and box shipping
- Runners
- Pallets
- Blocks
- Decks

### FABRICATION

Hexacomb is an ideal protective packaging solution for multiple channels and product options, including fabrication. Its strength, durability, high cushioning and rigidity makes it one of the best solutions for fabricators. Hexacomb is easy to use, cut, shape and assemble into a multitude of orientations and sizes; it can also be laminated to foam and other multi-material substrates to offer maximized performance that meets the most demanding of performance requirements.

### SIGNAGE AND GRAPHIC DISPLAYS

Falconboard™ naturally-rigid graphic board is the perfect sustainable printing and signage alternative. Made from natural kraft core that is 100% renewable, Falconboard provides optimal strength and printing performance while resisting denting and warping. Falconboard is malleable enough for easy, clean cuts and is compatible with most commercial connective systems like edge tap and plastic or metal edging or channels. Printing capabilities equal that of foamboards, including multiple wide format and digital solutions. Whatever your printing need, it's the smartest solution.

- Point of purchase (POP) displays
- Direct screen printing
- Direct digital printing
- Trade show materials
- Exhibits and kiosks
- Mounting
- Framing

BREADTH &  
STABILITY

**Hexacomb is part of Pregis Corporation, a global supplier of protective and flexible packaging solutions.**

Customers can always count on Pregis Hexacomb to continually seek new and innovative ways to help them grow and increase profitability. Because of our history and strong financial stability we've had the pleasure of doing business with the world's top manufacturing and fulfillment operations with our best-in-class quality products for years. A relationship with Pregis Hexacomb is one that consistently adds value to your company. Our customers depend on us not only as their packaging solutions provider but also as their trusted business partner.
